Notes:

The categorization of revenue by end market is determined using a variety of data points including the technical characteristics of the product, the "sold to" customer information, the "ship to" customer information and the end customer product or application into which our product will be incorporated. The assignment of products to end markets may change over time. When this occurs, we reclassify revenue by end market for prior periods. Such reclassifications typically do not materially change the sizing of, or the underlying revenue trends within, each end market.

(1) These revenue trends are unaudited. (2) The sum and/or computation of the individual amounts may not equal the total due to rounding.
