**CONFLICT MINERALS REPORT OF ANALOG DEVICES, INC.
IN ACCORD WITH RULE 13P-1 UNDER THE SECURITIES EXCHANGE ACT OF 1934
(UNAUDITED)**

Section 1: Introduction

This is the Conflict Minerals Report of Analog Devices, Inc. (“Analog Devices”, “we”, “our”) for calendar year 2014 in accord with Rule 13p-1 under the Securities Exchange Act of 1934 (“Rule 13p-1”). Numerous terms in this Report are defined in Rule 13p-1 and Form SD and the reader is referred to those sources and to 1934 Act Release No. 34-67716 (August 22, 2012) for such definitions and explanations thereof.

Gold, tantalum, tin or tungsten (collectively, the “conflict minerals”) are necessary to the functionality or production of products manufactured or contracted to be manufactured by Analog Devices. Such products include Integrated Circuits, Assembled Products and Evaluation Boards, which (depending on the product) contain one or more conflict minerals (collectively, the “Products”). Analog Devices either knows that necessary conflict minerals originated in the Democratic Republic of the Congo or an adjoining country (collectively, “Covered Countries”) and are not from recycled or scrap sources, or has reason to believe that necessary conflict minerals may have originated in the Covered Countries and has reason to believe that they may not be from recycled or scrap sources. Accordingly we undertook due diligence to determine whether the necessary conflict minerals in the Products did originate or may have originated in the Covered Countries.

Analog Devices is many steps removed from the mining of the conflict minerals; we do not purchase raw ore or unrefined conflict minerals, and we do no purchasing in the Covered Countries. We either purchase conflict minerals indirectly from a smelter or refiner for use in our manufacturing processes or purchase components from suppliers that incorporate conflict minerals. The origin of conflict minerals cannot be determined with any certainty once the raw ores are smelted, refined and converted to ingots, bullion or other conflict-mineral containing derivatives. Smelters and refiners are consolidating points for raw ore and are therefore in the best position in the total supply chain to know the origin of the ores. Our due diligence measures were based on multi-industry initiatives with the smelters and refiners of conflict minerals who provide those conflict minerals to Analog Devices’ suppliers.

Section 2: Due Diligence

A. Design of Analog Devices’ due diligence framework

Analog Devices designed our due diligence measures to conform, in all material respects, with the internationally recognized due diligence framework in the OECD Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas: Second Edition (OECD 2013) (“OECD Framework”), including related supplements for each of the conflict minerals.

B. Description of Analog Devices’ due diligence measures performed with respect to products manufactured during 2014

Analog Devices’ due diligence measures performed with respect to products manufactured during 2014 included:

- Continuing our participation as a member company in the Conflict-Free Sourcing Initiative (CFSI), under sponsorship of the Electronic Industry Citizenship Coalition (EICC).
- Communicating to our suppliers and the public our DRC Conflict Free sourcing policy for the supply chain of minerals originating from Conflict-Affected and High-Risk Areas. Our Conflict Minerals Policy Statement can be found on our website at www.analog.com.
- As part of our risk management plan:
 - Updating our purchase order terms and conditions to require suppliers that obtain conflict minerals from smelters whose minerals originate from the Covered Countries to use only those smelters that either (1) submit to a conflict-free certification audit or (2) participate in the EICC/GeSI Conflict – Free Smelter Program (CFSP). Suppliers are subject to an audit by Analog Devices to confirm the supplier’s compliance with these requirements.
 - Increasing our engagement with direct suppliers and providing guidance regarding training materials from the CFSI, which aims to improve the quality and quantity of smelter information received from suppliers using the CFSI Conflict Minerals Reporting (CMR) template for this reporting period.
- Reassessing all of our products and suppliers in order to identify conflict minerals scope and risk in our supply chain. Analog Devices’ existing suppliers were evaluated for use of conflict minerals through a review of internal documents, including bills of material, materials declarations and purchasing contracts. New suppliers were assessed as part of the General Procurement Specifications (GPS) applied to all new suppliers. Suppliers identified as providing materials to Analog Devices that include conflict minerals were aggregated onto an electronic tracking spreadsheet.
- Conducting a reasonable country of origin inquiry (RCOI) by circulating a supply-chain survey with direct suppliers included on the electronic tracking spreadsheet using the EICC/GeSI CMR Template. The purpose of this supplier survey was to identify, if possible, the smelters and refiners that supply necessary conflict minerals in our Products. In 2014, we surveyed 316 suppliers and received 224 responses or a 71% response rate.
- As part of our risk management plan, verifying that direct suppliers completed all pertinent sections of the CMR template and making follow-up inquiries as necessary to obtain responsive information from as many suppliers as possible. For non-responsive suppliers, we will continue to engage with the supplier to obtain a survey response. If a supplier fails to provide survey information, we will take measures up to and including termination of our relationship with the supplier.
- Comparing the smelters and refiners identified by direct suppliers via the CMR template against the list of smelter and refinery facilities that have received a “conflict free” designation (such as through the CFSP’s lists for tantalum, tin, tungsten and gold) by participating in an independent third party smelter audit. The responses from our suppliers listed 255 entities as smelters or refiners of conflict minerals in their supply chains. 150 of these entities were identified as conflict-free by our suppliers. Analog Devices compared the identified entities to the CFS list of smelters and we confirmed that all conflict-free entities reported by our suppliers were in fact designated as conflict-free by the CFSP. The following is a summary of the smelters used by our suppliers broken out by mineral type:

Metal	Total Known Smelters Used	Conflict-Free Smelters
Tantalum	40	40
Tungsten	34	14
Tin	72	40
Gold	112	67
Total	258	161

- Selecting a software package to replace the internally managed spreadsheets and allow for improved monitoring of our suppliers.

Section 3: Other Matters

Based on the information provided by our suppliers through December 31, 2014, we believe that the facilities that may have been used to process conflict minerals in our products include the refiners listed in Annex I below.

After exercising the due diligence described above, Analog Devices was unable to obtain sufficient information from our direct suppliers or other sources to conclude whether necessary conflict minerals originated in the Covered Countries and/or, if so, whether or not the conflict minerals directly or indirectly financed an armed group in the Covered Countries. However, based on information provided by our suppliers, as well as from the RCOI data from CFSI, Analog Devices believes the countries of origin of the conflict minerals contained in our products may include the countries listed in Annex II below.

Analog Devices will undertake the following steps during the next compliance period to continue to improve the due diligence conducted and to further mitigate the risk that our necessary conflict minerals benefit armed groups, including:

- Participating in industry initiatives and engaging in direct contact with vendors to increase the response rate of suppliers' supply-chain surveys.
- Contacting smelters identified as a result of the RCOI process and requesting their participation in obtaining a "conflict free" designation from an industry program such as the EICC/GeSI Conflict Free Smelter program or equivalent, if they have not already done so.
- As more smelters participate in the CFSP, comparing RCOI results to information collected via independent conflict free smelter validation programs.
- Implementing the software package that we have selected to replace the internally managed spreadsheets and allow for improved monitoring of our suppliers.
- Obtain an independent assessment of the current state of our due diligence framework for alignment with the OECD Framework.

ANNEX I
